## INTRODUCTION

The Agriculture Data Directory classifies data collected during the 1976 Census of Agriculture, to make these data more accessible to the user. It is composed of four parts plus the usual introduction.

The introduction, in addition to sketching the content of the Directory, provides catalogue numbers as a ready reference for particular data on a specified geographical base.

Part I of the Directory provides a census definition for specific subjects, constraints of these definitions and the actual data tabulated for each of these subjects. Comparability of the responses (items to which respondents could answer) on the 1976 Agriculture Questionnaire with 1961, 1966 and 1971, the geographic base and available form of the data are also found in this section.

Data Format, the broad heading under which Geographic Base and Available Form appear, also includes various cross-classifications of the particular data.

The Geographic Base gives the area for which the data were tabulated. The census subdivision was the smallest areal base for most of the tabulations. For census purposes, this includes municipalities, Indian Reserves and unorganized territories or statistical areas equivalent to these. In some cases, data are available only for census divisions. Census divisions include counties, regional districts, regional municipalities and territorial districts or statistical areas that have been created as an equivalent to any one of these.

The available form of the particular data may be publication, microfilm, microfiche, microfilm photocopy or computer summary tape. Although much of the

data are published by province and census division or census subdivision, all are available on microfilm, microfilm photocopy or microfiche depending on which application is more suitable, and frequently for a smaller geographic base. For those users with computer facilities at their disposal, summary tables will be available at the subdivision level on computer tape for further computer analysis.

Part II of the Directory concerns itself with the distributions for the various terms. In some cases, the distributions vary with regions, for example, size of farm distributions are different for the East and the West as a result of the preponderance of smaller farms in the East and the number of large farms in the West.

Part III presents a Map of Canada delineating Provinces and Census Divisions and the Index.

Part IV presents the Census of Agriculture Official List. It is organized in sequence by province, census division and census subdivision. Maps are available from Census Data Dissemination Division which outline federal electoral districts and enumeration areas.

The data described in this Directory are those which are readily available. Special tabulations when required will be prepared for the user, at cost, subject to available resources and confidentiality constraints.

As in past censuses, the 1976 Census of Agriculture tabulation programme will provide printouts for "split" municipalities (census subdivisions).

These printouts will be made available to the provincial focal points or any user specifically requesting them.

Simultaneously, it should be emphasized that all the characteristics collected during the 1976 Census of Agriculture will be made available, at cost, for all of the agricultural holdings - defined as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the past 12 months of \$50 or more. The STATPAK data base will contain all these characteristics with a built-in capability for retrieving it for user-specified areas.

The census-farm definition differs from that used in previous Censuses of Agriculture. It is defined in the 1976 Census as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the year 1975 of \$1,200 or more.

The 1976 Census of Agriculture tabulation and publication programme provides a large number of characteristics in metric as well as imperial units. The conversion from acres to hectares was made by Statistics Canada using the factor 0.404 685 6 hectare equals one acre. Where areas are reported in square feet, the metric equivalent used is square metres. The conversion factor is 0.092 903 04 square metre equals one square foot. The conversion factor from pounds to kilograms was made by using the factor 0.543 592 37 kilogram equals one pound. In some cases, some of the metric figures may not add because of rounding.

A list of the Census of Agriculture (Special Series) publications with catalogue numbers and prices follows for ready reference. These reports provide summary information on specified topics for which there is widespread demand and are published earlier than the regular series of volume reports.

<u>Catalogue Number</u>	<u>Title</u>	
96-851	Crops on Census-farms (SA-1)	\$4.25
96-852	Livestock and Poultry on Census-farms (SA-2)	\$3.00
96-853	Machinery and Equipment on Census-farms (SA-3)	\$3.00
96-854	Census-farms by Size, Area and Use of Land (SA-4)	\$3.00
96-855	Census-farms Classified by Economic Class and Farms with Sales of \$2,500 or More by Product Type (SA-5)	\$3.00
96-856	Population, Tenure, Age, Residence of Operator, Type of Organization (SA-6)	\$3.00
96-857	Number and Area of Census-farms by Census Division (SA-7)	\$ .70
96-858	Number and Area of Census-farms by Census Subdivision (SA-8)	\$3.00
	Selected Data for Census-farms by Economic Class:	
96-859	Atlantic Provinces (SA-9)	\$4.25
96-860	Quebec (SA-10)	\$4.25
96-861	Ontario (SA-11)	\$4.25
96-862	Western Provinces (SA-12)	\$5.75

Most of the data are available in a volume series by province. The catalogue numbers for each province are listed below with the cost of each. This series represents the main statistical results of the 1976 Census of Agriculture.

Volume 11

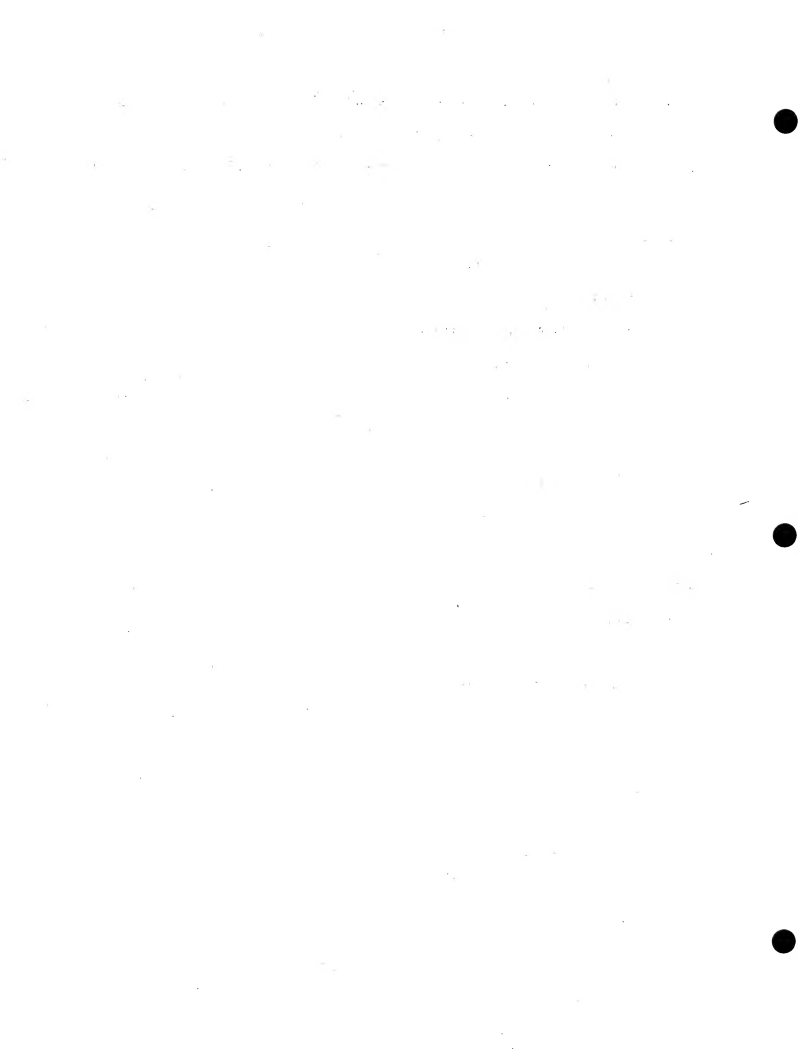

96-800	Canada: Summary Tables (11-1)	\$4.25
96-801	Newfoundland (11-2)	\$4.25
96-802	Prince Edward Island (11-3)	\$4.25

96-805	Quebec (12-1)	\$10.00
96-806	Ontario (12-2)	\$7.00

Volume 13

96-807	Manitoba (13-1)	\$5.75
96-808	Saskatchewan (13-2)	\$5.75
96-809	Alberta (13-3)	\$4.25
96-810	British Columbia (13-4)	\$5.75

PART I

AGE OF OPERATOR

Refers to the age of the operator at the time of his last birthday.

AVAILABLE DATA:

For the following age distribution:

Under 25 years	55-59 years
25-34 "	60-64 "
35-44 "	65-69 "
45-54 "	70 years and over

The following is available:

Operators distributed by age of operator

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Random computer assignment of the year of birth weighted to the frequency of occurrences of each possible year of birth (using 1971 Census of Agriculture figures for Canada) was made for blank entries.

DATA FORMAT:

Item	Geographic Base	Available Form					
		Special Series	Volume Series	Micro-film	Micro-fiche	Mun. Summ. Tape.	Micro-film Photo-copy

days of off-farm work (41)	Division		x				x
milk destination (46)	Division						x

RESIDENCE

Refers to the period of time that the operator resided on his holding during the previous 12 months.

AVAILABLE DATA:

For the following distributions:

9-12 months  
5- 8 "  
1- 4 "  
did not live on this holding

The following is available:

Operators distributed by length of residence

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: If this question was left blank by the respondent, computer imputation of "9-12 months" was made to census-farms reporting any one of the following characteristics: entry in operator's household number and/or cows and heifers milking or to be milked and/or pigs and/or chickens and/or turkeys and/or geese and/or ducks and/or automobiles; "did not live on this holding" imputation was made to all the other cases.

TYPE OF ORGANIZATION

Refers to the business arrangement for the operation of the agricultural holding.

AVAILABLE DATA:

For the following types of organization:

- operated privately
- partnership
- institution or community pasture
- incorporated, family
- incorporated, other
- other

The following datum is available:

Farms distributed by type of organization

CENSUSES: 1976, 1971

REMARKS: Included as operated privately by an individual were holdings operated by or for an individual regardless of whether owned, rented or managed. Land managed for an incorporated firm in conjunction with land operated by an owner or renter for his own use, if the total operation was predominantly by the individual for himself, was included in this category also. Partnerships included only operations having a formalized written partnership agreement, e.g., written partnerships between two or more individuals, or between fathers and sons, or other family members. Oral or implied agreements that were not in written form were not included as partnerships, but were typed as being operated privately by an individual. 'Institution' referred to land used for agricultural purposes by institutions such as experimental farms, schools or penitentiaries, but did not include land owned by an institution but rented to an individual who operated it on his own account. To be included as a community pasture or other type of public pasture, the land had

TYPE OF ORGANIZATION — Concluded

to be owned by a municipality, province or the federal government.

'Incorporated family' referred to farms operated as incorporated businesses with the shares owned mostly by the operator and his family.

'Incorporated other' referred to farms operated as incorporated businesses with the shares owned mostly by people other than the operator and his family.

days of off-farm work (41)	Division						x
milk destination (46)	Division						x

FARM POPULATION

All persons living in a dwelling situated on a census-farm as defined in the census were considered to be farm population, regardless of their occupation. In the case of institutions located on a census-farm, only the manager, hired agricultural workers and members of their households were included with this population. This population figure includes both urban and rural census-farm population. Persons living on census-farms that were located in cities, towns and villages were included with the census-farm population of the adjoining subdivisions. This figure may differ from the rural farm population figure published in population census reports.

DATA FORMAT:

Item	Geographic Base	Available Form					
		Special Series	Volume Series	Micro-film	Micro-fiche	Mun. Summ. Tape	Micro-film Photo-copy
Farm population, number of ...	Subdivision		x				

CENSUS-FARM

A farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the year 1975 of \$1,200 or more. The area of census-farms includes all the land operated on a census-farm. The area of agricultural land reported for each subdivision represents the area of land operated by farmers whose headquarters are in the subdivision. The area of census-farms for the subdivision units may, therefore, be greater or less than the actual census-farm area within the subdivision boundaries.

AVAILABLE DATA:

The following data are available:

Census-farms, number of  
Census-farms, area of  
Farms distributed by size of farm (1)  
Farms distributed by size of farm, FAO (1)  
Farms distributed by size of farm, 1941 (1)

CENSUSES: 1976, 1971, 1966, 1961

The census-farm definition differs from that used in previous Censuses of Agriculture. It is defined in the 1976 Census as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the year 1975 of \$1,200 or more. In 1971 it was defined as a farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the past 12 months of \$50 or more. A census-farm must be operated as a single unit and may consist of a single tract of land or a number of separate tracts held under the same or different tenures. Agricultural holdings of one acre or more with sales of agricultural products of less than \$1,200 during the year 1975 because of crop failure or other unusual condition, and holdings not operated during that period were classed as census-farms if it was estimated that sales during the 12 months following the census date would be \$1,200 or more. All

CENSUS-FARM — Continued

reported areas for census-farms are in acres unless otherwise indicated. Tabulations in metric units were produced for total farm area, tenure, field crops, greenhouses and mushroom houses, nurseries, vegetables, tree fruits, small fruits, use of land and milk production.

FIELD CROPS

Refers to field crops seeded or to be seeded for harvest in 1976.

AVAILABLE DATA:

For the following field crops:

spring wheat	field peas	flaxseed
durum wheat	field beans	soybeans for beans
winter wheat	corn for grain	sunflowers for seed
oats for grain	corn for ensilage	rapeseed
barley	alfalfa and alfalfa mixtures	mustard seed
mixed grains	other tame hay	potatoes
fall rye	oats to be cut for green	tobacco
spring rye	feed, hay or ensilage	sugar beets for sugar
buckwheat	other fodder crops	other field crops

The following data are available:

 Farms reporting sugar beets - distribution (18)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Field crops tabulations for 1976 Census are available in metric equivalents. Where double cropping (two or more crops were to be harvested on the same land in 1976) occurred, the area of each crop is reported. Where intercropping occurred, the acreage of each crop is reported as if it grew alone. The 1961 and 1966 definitions of field crops listed potatoes for home use or for sale, and included turnips, swedes and mangels as a separate crop. In 1961, safflower was also listed separately.

VEGETABLES

Refers to vegetables grown mainly for sale for the fresh market, canning, freezing, or other processing. Vegetables grown on institutional farms and consumed by members of the institution are considered sold. Those grown under contract are considered sold from the place where grown. Potatoes are not included with vegetables on census-farms, but with field crops.

AVAILABLE DATA: Vegetables

The following data are available:

Vegetables, area of  
Vegetables, farms reporting  
Area of vegetables - distribution (19)  
Farms reporting vegetables - distribution (19)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Where double cropping occurred, each crop was reported. Vegetable seed produced mainly for sale, with the exception of seed potatoes, was also included.

The 1976 and 1966 definition did not code individual varieties. All vegetables were reported under one heading. In 1961, turnips were included with field crops.

GREENHOUSES, NURSERY PRODUCTS AND MUSHROOM HOUSES

The areas of greenhouses and mushroom houses were recorded in square feet. Greenhouses that were used only for the initial growth of plants that were later transplanted to the field were not included. Area of nursery products, cut flowers and dry bulbs was reported in acres and tenths of acres but tabulated in whole acres. The areas of greenhouses and mushroom houses are also available in square metres for the 1976 Census only.

AVAILABLE DATA:

For the following types of products:

greenhouses and mushroom houses

nursery products, cut flowers and dry bulbs grown out of doors

The following data are available:

Greenhouses and mushroom houses; nursery products, cut flowers and dry bulbs grown out of doors, area of

Greenhouses, mushroom houses; nursery products, cut flowers and dry bulbs grown out of doors, farms reporting

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: In 1976 and 1966, nursery products, cut flowers and dry bulbs were combined as were greenhouse and mushroom products.

MILK PRODUCTION

The reference day used in this question is the day before the questionnaire was completed. Generally, questionnaires were completed as of June 1, 1976. It relates to the production and cows milked for the full 24-hour period. The cows milked and production are asked for the one day as it has been found that this period is more readily recalled than a longer period.

AVAILABLE DATA:

The following data are available:

Cows and heifers milked yesterday, number of  
Milk produced yesterday, pounds of  
Average milk production per cow per day

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Milk produced yesterday and average milk production are also available in metric equivalents.

MILK SHIPMENTS

Milk shipments refers to the principal destination of milk and/or cream shipped from this holding during May, according to the pounds of milk shipped. Cream sold may be converted to milk equivalents by considering  $3\frac{1}{2}$  pounds of butterfat to be equivalent to 100 pounds of milk.

AVAILABLE DATA:

For the following milk shipment destinations:

Fluid milk plant  
Industrial milk plant  
Creamery for butter  
Do not know

CENSUS: 1976

REMARKS: Industrial milk plant includes: cheese factory, condensery, milk drying plant, etc.

SHEEP

Refers to all sheep on the holding as of June 1, 1976, regardless of ownership.

AVAILABLE DATA:

For the following sheep:

lambs under 1 year  
ewes, rams and wethers, 1 year and over

The following data are available:

Sheep, number of each  
Sheep, farms reporting each  
Sheep, total number of  
Sheep, farms reporting any  
Number of sheep - distribution (22)  
Farms reporting sheep - distribution (22)  
Number of ewes, rams and wethers - distribution (25)  
Farms reporting ewes, rams and wethers - distribution (25)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Sheep owned by a farm operator but which were pastured or kept on another farm or ranch, unless it was a community pasture, were not included.

POULTRY

CHICKENS AND OTHER POULTRY

Refers to all hens and chickens and other poultry located on the holding as of June 1, 1976, regardless of ownership. They could belong to the operator, members of his family or hired help. Birds owned by someone else that were being fed under contract were included.

AVAILABLE DATA:

For the following chickens:

- hens and pullets, five months and over, kept for laying
- pullets and pullet chicks under five months, intended for laying
- broilers including cornish
- roasters
- all other hens and chickens

Also for the following other poultry:

- turkeys
- geese
- ducks

POULTRY - Continued

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: The 1961 and 1966 definitions were completely different from that of 1971 and 1976. The 1966 definition was, 'chicks under two months (including broilers)', 'pullets two to six months intended for laying', 'hens and pullets six months and over, kept for laying', 'all other chickens two months old and over'. In 1961, the term 'of chicks under two months, how many are pullet chicks intended for laying?', was included.

LIVESTOCK AND POULTRY, INVENTORY VALUE

The values for livestock and poultry were assigned from data on current farm values for the various types of livestock and poultry obtained from the Agriculture Division of Statistics Canada.

AVAILABLE DATA:

For the following types of livestock and poultry:

cattle	chickens
pigs	turkeys
sheep	geese
	ducks
Classes of livestock and poultry	
milk cows	pigs, 3-6 months
beef cows	pigs, under 3 months
milk heifers	lambs
beef heifers	ewes, rams and wethers
steers	hens
bulls	pullets
calves	broilers including Cornish
pigs, 6 months and over	roasters
	other chickens

The following data are available:

Livestock and poultry, value of each  
Livestock and poultry, total value of  
Farms reporting any livestock and poultry  
Farms distributed by value of livestock and poultry (36)  
Classes of livestock and poultry, value of each

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Livestock and poultry values in 1961 and 1966 excluded values for mink and rabbits. Classes of livestock and poultry values were not tabulated in 1961.

### FARM CAPITAL

Comprises the addition of reported values of land and buildings, machinery and equipment and calculated inventory values of livestock and poultry.

Census-farm operators were asked to give a value for land and buildings, and farm machinery and equipment on their holdings regardless of tenure. The value reported was an estimate of the market value, not the original, replacement or assessed value.

#### AVAILABLE DATA:

For the following capital items:

- land and buildings
- machinery and equipment
- livestock and poultry

The following data are available:

- Farm capital, total value of
- Value of land and buildings
- Value of machinery and equipment
- Value of livestock and poultry
- Farms distributed by value of farm capital (33)
- Farms distributed by value of land and buildings (34)
- Farms distributed by value of machinery and equipment (35)
- Farms distributed by value of livestock and poultry (36)
- Value of all classes of livestock and poultry

CENSUSES: 1976, 1971, 1966, 1961

MACHINERY AND EQUIPMENT

Refers to agricultural machines on the holding at the census date regardless of whether the machines were owned by the operator or someone else.

AVAILABLE DATA:

For the following machinery and equipment:

automobiles	motor trucks
tractors	swathers, total
grain combines, total	swathers, self-propelled
grain combines, self-propelled	swathers, others
grain combines, pull type	forage crop harvesters
pick-up hay balers	

Also for:

milking machines  
bulk milk tanks

The following data are available:

Machinery and equipment, number of each  
Machinery and equipment, farms reporting each  
Farms distributed by number of automobiles (40)  
Farms distributed by number of tractors (40)  
Automobiles and/or motor trucks, farms reporting any  
Milking machines, farms reporting  
Bulk milk tanks, farms reporting  
Other machinery and equipment, value of  
Other machinery and equipment, farms reporting  
Machinery and equipment, total value of  
Farms distributed by value of machinery and equipment (35)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: The 1976, 1961 and 1966 questionnaires did not include riding garden tractors. Swathers listed as self-propelled or other in 1971 were reported under the one heading, 'swathers' in 1966. In 1961, swathers were reported only for the Prairie Provinces and British Columbia. In 1961 and 1966, bulk milk tanks were not reported separately. Grain

MACHINERY AND EQUIPMENT - Continued

binders, threshing machines and electric milk coolers were reported separately in 1961.

HIRED AGRICULTURAL LABOUR

Refers to paid agricultural labour (15 years and over) hired for the holding during the past 12 months. Weeks of paid labour by sex were reported as well as number of year-round workers currently employed.

AVAILABLE DATA:

For the following classes of paid labour:

Male  
Female

The following data are available:

Hired agricultural labour, weeks of each  
Hired agricultural labour, farms reporting each  
Hired agricultural labour, total weeks of  
Hired agricultural labour, farms reporting any  
Paid year-round workers, number of  
Paid year-round workers, farms reporting  
Farms distributed by total number of weeks of hired agricultural labour  
(37)  
Farms distributed by number of paid year-round workers (38)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: Custom operators were not included as hired agricultural labour. One man-week of labour was defined as the amount of labour done by one person when working on a full-time basis for a period of one week. The total weeks of agricultural work done by all members of a Hutterite Colony were included as hired agricultural labour. In the case of a partly managed farm, only the estimated weeks worked by the manager on the managed portion of the partly managed farm were included.

In 1966, the number of hired agricultural workers 15 years and over by sex were reported if they had been employed 20 hours or more during the week ending May 28, 1966.

OFF-FARM WORK

Refers to days of work that the operator did for pay (wages, salary, commission, etc.) off his holding during the past 12 months.

AVAILABLE DATA: Total days of off-farm work

The following data are available:

Off-farm work, total number of days of

Off-farm work, farms reporting any

Farms distributed by days of off-farm work (41)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: In 1976 and 1966, only total days of off-farm work were reported; the type of work was not. In 1961, off-farm work was reported as: agricultural, working in the woods, fisherman or trapper, construction work, truck or bus driver, factory production work, clerical work or other. In 1971 it was reported as: agricultural work off this holding, logging, lumbering or forestry work, truck or bus driver, operator of road maintenance or construction equipment, other kinds of off-farm work.

TENURE

Refers to the classification of land operated as area owned and area rented or leased from others or both. Area owned includes land that the operator or his wife holds under title, homestead law, purchase contract, or as an heir or trustee of any individual estate; land more or less permanently occupied by a squatter; and land managed by the operator for another person who owns the land. Area rented or leased from others includes land rented or leased from others on a cash basis; rented on a crop share basis from others; used rent-free or used under lease arrangements with federal, provincial or municipal governments; or land managed by the operator for another party who rents or leases the land. Land used under a per head grazing permit or fee was not included.

AVAILABLE DATA:

For the following tenurial classes:

- Tenure of land
  - land owned
  - land rented or leased
- Tenure of operator
  - owner
  - tenant
  - owner-tenant

The following data are available:

- Tenure of land, area by
- Tenure of operator, number by
- Tenure of operator, area by

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: The area operated for others as a hired manager was identified as a separate tenurial class in 1961 and 1966.

### TYPE OF FARM

With the exception of 'institutional farms, etc.', all census-farms with sales of \$2,500 or more were classified by product type.

There are ten major types, namely, dairy, cattle, hogs, poultry, wheat, small grains, field crops, fruits and vegetables, miscellaneous specialty and mixed type. The major differences compared with the previous censuses are the deletion of the forestry type of farm and the division of the cattle-hog-sheep type into two types, 'cattle' and 'hogs'. The very small number of sheep farms would be included with 'miscellaneous specialty'.

The variable used for typing each farm are as follows:

#### Farm Classification by Product Type

##### Based on Inventory Data

- (1) Dairy: (a) The value of cows and heifers, 2 years and over, must be 51% or more of the grand total of imputed values, or  
(b) the value of cows and heifers, 2 years and over, must be 40.0% to 50.9% of the grand total and together with total cattle amount to 51% or more of the grand total of imputed values.
- (2) Cattle: (excluding farms qualifying as dairy farms)  
The value of total cattle must be 51% or more of the grand total of imputed values. (The possible double counting problem of dairy cows in the total cattle is adjusted by the corresponding price coefficients during the imputation process.)
- (3) Hogs: The value of total pigs must be 51% or more of the grand total of imputed values.
- (4) Poultry: The total value of hens and pullets, 5 months and over, broilers, turkeys, geese and ducks must be 51% or more of the grand imputed values.

TYPE OF FARM - Continued

- (5) Wheat: The total value of wheat (spring, durum, winter) must be 51% or more of the grand total of imputed values.
- (6) Small grains: (excluding farms qualifying as wheat farms)
- The total value of oats for grain, barley, mixed grains, fall rye, buckwheat, field peas, field beans, corn for grain and flaxseed, soybeans, sunflowers and rapeseed must be 51% or more of the grand total of imputed values.
- (7) Field crops, other than small grain: The total value of corn for ensilage, alfalfa and mixtures, all other tame hay, oats to be cut for green feed, other fodder crops and potatoes, tobacco and sugar beets for sugar must be 51% or more of the grand total of imputed values.
- (8) Fruits and vegetables: The total value of vegetables, tree fruits, and small fruits must be 51% or more of the grand total of imputed values.
- (9) Miscellaneous specialty: The value of either nursery products and greenhouses, total sheep or other livestock must be 51% or more of the grand total of imputed values.
- (10) Mixed farm: (Excluding farms qualifying as any above-mentioned types)
- (a) Livestock combination: a farm qualifying as any one of the following:
- cattle-hog (excluding farms qualifying as cattle, hog types):
- the total value of total cattle and total pigs exceeds 51% of the grand total of imputed values.

TYPE OF FARM - Continued

- cattle-sheep (excluding farms qualifying as cattle or sheep types): the total value of total cattle and total sheep exceeds 51% of the grand total of imputed values.
  - hog-sheep (excluding farms qualifying as hog or sheep types): the total value of total pigs and total sheep exceeds 51% of the grand total of imputed values.
  - cattle-hog-sheep (excluding farms qualifying as cattle-hog, cattle-sheep, hog-sheep, cattle, hog, or sheep types), and the total value of any of the above, combined with poultry and poultry products, exceeds 51% of the grand total of the imputed values.
- (b) Field crops combination: The total value of codes 010 to 034 inclusive must be 51% or more of the grand total of imputed values.
- (c) Other combinations: Farms not qualifying for any one of the above-mentioned types.

(11) Supplemental types:

- (a) To keep historical comparison with previous censuses, it is decided to have cattle-hog-sheep supplemental type based on the 1971 concept (i.e., including cattle, hog, sheep, cattle-hog, cattle-sheep, hog-sheep, or cattle-hog-sheep).
- (b) To show the relative significance of the cattle-hog combination among all livestock combinations, it is desirable to have a cattle-hog supplemental type.

TYPE OF FARM - Continued

REMARKS: One of the main reasons for the development of a new farm typing procedure was the deletion of the detailed sales questions from the 1976 Census and the inadequacy of sales data in previous censuses. The 'sales by commodity' were essential in the typing of individual farms by previous methods. Consequently, the farm typing in 1976 has to depend on information other than sales and the reported inventory data were the only information available. The development of the scheme was completed in co-operation with Economics Branch, Agriculture Canada and has been successfully utilized in the current census processing.

Assumptions underlying the typing procedure: the scheme employed the 1976 physical inventory reported on census questionnaires and weighted by a set of value coefficients. The value coefficients were derived from the average value per unit of inventory items in every census division across Canada over a specified period of time. Adjustments were made to arrive at an estimate by allowing for feed grain consumed on the farm.

To maintain the historical comparability of type of farm classification, some assumptions had to be established. Prior to the 1976 Census, farm typing was based on the realized value of farm sales from the previous year. For example, farm types for the 1971 Census were derived from sales figures for 1970. The 1976 scheme is based on the potential value of farm sales, imputed from inventory data reported in the current year, i.e., in 1976. If the distribution of actual and potential sales was highly and positively correlated, then the two methods of classification (both generally based on 51% or more of the

TYPE OF FARM -- Continued

total sales) should be comparable. Therefore, the underlying assumptions of the scheme are stated as follows:

1. Under normal conditions, the major farming activities of individual farms are not likely to change from one year to another, i.e., 1975 to 1976.
2. The value of agricultural products sold in 1975 and the reported 1976 physical inventories at the farm level are highly and positively correlated.
3. The yield and price of the various products considered will, under normal conditions, remain at the same level or change by the same proportion during 1975-1976.

Historical comparability of the resulting data: Maintaining historical comparability of the data has been one of the most essential considerations in the development of the scheme. The basic criterion of 51% or more of the total value of agricultural products sold for the typing of farms remains exactly the same as in previous censuses. In 1976, there are ten basic types of farms.

Forestry products, strictly speaking, have not been defined as 'agricultural products'. Therefore, an establishment reporting only the sales of forestry products should have been excluded from the census by the definition of 'agricultural products'. The division of 'cattle-hog-sheep' into 'cattle' and 'hogs' types is one of the major improvements in farm typing statistics. In 1971, 34.7% of the farms reporting sales of \$2,500 or more were classified as 'cattle-hog-sheep' type, 22.6% were 'cattle' type and 6.3% were 'hog' type. The remaining 5.8% were classed as 'miscellaneous specialty' or 'mixed livestock combination' type. Therefore,

TYPE OF FARM - Continued

the division of 'cattle-hog-sheep' in 1976 will probably increase the number in 'miscellaneous' by up to 2% because of the inclusion of sheep farms. The remaining farms would be in the 'mixed livestock combination' type. In the 1976 Census publications, we will still provide users with 'cattle-hog-sheep' as a supplemental type for historical comparison. The 'cattle-hog' combination will also be included to show their relative significance in the mixed livestock combination category.

The efficiency of the scheme is largely dependent on the validity of the above-mentioned assumptions. The validity varies according to the type of farming activities. Although the scheme was systematically tested at every phase of the development, it was evident that random variations in the production and price of various products at different levels will be the major causes of discrepancies.

General observations from the test based on 1971 data indicated that farms with dominant value of production or less variable types of production (e.g., those that require unique management skills, heavy overhead costs, etc.) presented no difficulties in the consistency of typing. However, the efficiency of the scheme is lower in less specialized farming with low concentration of sales from related types of products. Generally speaking, the scheme has higher serviceability for livestock type of production than for crops. In short, some inconsistencies in typing when compared with previous censuses are expected, especially in marginal and mixed type farms. However, they are not significant in relation to the total number of farms. We are confident that the 1976 scheme for the farm classification by product

TYPE OF FARM — Concluded

type is sound and will produce useful data. The resulting classification should generally be accepted as a true reflection of the agricultural industry at the point of reference.

AGRICULTURAL PRODUCTS SOLD

Includes all agricultural products produced and sold from an agricultural holding during 1975. A product was considered as sold regardless of whether the sales income was received by the operator or by some other person. Also included with sales from the operator's farm are the landlord's share of products sold; cash advances for stored grain; deficiency payments; patronage dividends for the particular products involved; crop insurance; and federal dairy subsidy payments. We have included Canadian Wheat Board payments received during 1975 (including the landlord's share) regardless of which crop year they apply to. The agricultural products of a Hutterite Colony or an institution which were used by the colony or the institution were considered sold.

AVAILABLE DATA:

The following total value of agricultural products sold distribution:

Under \$1,200	\$ 25,000-\$34,999
\$ 1,200-\$ 2,499	35,000- 49,999
2,500- 4,999	50,000- 74,999
5,000- 9,999	75,000- 99,999
10,000- 14,999	100,000 or more
15,000- 24,999	

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: The most significant difference between 1971 and 1976 total value of agricultural products sold was that in the 1971 Census the sales were obtained by individual commodity, whereas in 1976 the respondent checked a box which corresponded to the sales grouping for his farm. The lowest grouping specified was "under \$1,200", which enabled us to select census-farms according to our new definition while using an existing classification for which historical comparisons are possible.

An evaluation and a comparison of sales values obtained by both methods

AGRICULTURAL PRODUCTS SOLD — Concluded

(add up or check the box) using both 1971 and 1976 data (AES, PCAS and Census) indicated that there were no significant differences between the two data collection methods.

When no sales data were reported, such as in the case of crop failure or farms operated for the first time in 1976, an estimate of sales was assigned during the editing phase of the processing based on reported crop and livestock inventories.

Not included were the sales of livestock by drover operators on the drover's farm, if the livestock have been bought and sold within a 30-day period.

A large number of cross-classification tabulations by total value of agricultural products sold were produced. For a quick reference, refer to the subject for which the cross-classification is required.

### ECONOMIC CLASS

All census-farms are classified as one of eleven economic classes based upon the total value of sales of agricultural products, with the exception of 'institutional farms, etc.'. The classification of census-farms into economic classes presents a measure of the productive size of the holdings. Another distribution for economic class consists of four economic classes. This distribution is used for data published by subdivision.

#### AVAILABLE DATA:

The following information is available:

Farms distributed by value of sales (economic class)

CENSUSES: 1976, 1971, 1966, 1961

REMARKS: The economic classification of farms for the 1976 Census of Agriculture will be done basically in the same manner as in 1971. As indicated in the agricultural products sold section, there is one significant difference, however, in that in 1971, the sales were obtained by individual commodity, whereas in 1976 the respondent checked a box which corresponded to the sales grouping for his farm.

In 1971 there were 12 economic classes, the largest being \$50,000 and over. In 1966 there were 11 classes, the largest being \$35,000+. In 1961 there were only 10 economic classes, the largest being \$25,000+. It should be noted that variations in annual production and prices of agricultural products affect the economic class of individual census-farms.
